Orthogonality - Wikipedia - Statistical inference is the process of drawing conclusions from data that are subject to random variation, for example, observational errors or sampling variation. Initial requirements of such a system of procedures for inference and induction are that the system should produce reasonable answers when applied to well-defined situations and that it should be general enough to be applied across ... Wed, 19 Jul 2017 23:59:00 GMT  
Mathematical statistics - Wikipedia - First, recall that the basic form of an ARDL regression model is:  $y_t = \hat{\beta}_0 + \hat{\beta}_1 y_{t-1} + \dots + \hat{\beta}_k y_{t-p} + \hat{\beta}_0 x_t + \hat{\beta}_1 x_{t-1} + \hat{\beta}_2 x_{t-2} + \dots + \hat{\beta}_q x_{t-q} + \hat{\mu}_t$ , (1) where  $\hat{\mu}_t$  is a random "disturbance" term, which we'll assume is "well-behaved" in the usual sense. In particular, it will be serially independent. ARDL Models - Part II - Bounds Tests - Dave Giles - Value-Based Pricing and Reimbursement in Personalised Healthcare: Introduction to the Basic Health Economics Value-Based Pricing and Reimbursement in Personalised ... -
